# TABLE OF CONTENTS

## Catastrophic Failure

1. **Pillar Collapse at Welgedacht Colliery, South Africa: A Case Study**, J.N. van der Merwe and J.J. van Vuuren, ITASCA Africa, Booyens and N.J. von Rügge, Welgedacht Colliery, South Africa .................................................. 1

2. **Causes of Massive Directional Roof Falls in Room and Pillar Mines - Two Case Studies**, S. S. Peng, West Virginia University, Morgantown, WV .................................................. 8

3. **Catastrophic Collapse of Highwall Web Pillars and Preventative Design Measures**, R.K. Zipf, Jr., University of Missouri-Rolla, Rolla, MO .................................................. 18

4. **Mine Panel Collapse - Two Case Studies**, H. Chen and S. S. Peng, West Virginia University, Morgantown, WV .................................................. 29

## Geology and Its Mapping

7. **Geological Conditions at Continuous Miner Sections; Examples from Harrowbone Development Company, Mingo County, West Virginia**, J.M. Coelen, Harrowbone Development Company, Naugatuck, WV .................................................. 54

## Entry Stability and Its Evaluation

18th CONFERENCE ON GROUND CONTROL IN MINING

Longwall

15. Design Considerations for Bump-prone Longwall Mines, J.S. Chen and M. Mishra, Cyprus Amax Coal Co., Waynesburg, PA and J. DeMichiel, Cyprus Amax Coal Co., Englewood, CO ........................................ 124

17. Modern Shield Technology: Better Than Ever But Still Not Perfect, T.M. Barczak, NIOSH-Pittsburgh Research Lab, Pittsburgh, PA ........................................ 149

18. Shield Monitoring to Forecast Severe Face Weightings at the South Bulga Colliery, NSW, Australia, J. Sandford and S. Mahoney, South Bulga Colliery, Australia, and D.P. Concannon and M.J. DeMarco, NSA Engineering, Golden, CO ........................................ 164

Ground Control

20. Ground Control in South African Coal Mines - A U.S. Perspective, C. Mark, NIOSH-Pittsburgh Research Lab, Pittsburgh, PA ........................................ 186

23. Seismic Events Due to Underground Mining Activities, R. Fritsch and E. Rakers, DMT-Gesellschaft für Forschung und Prüfung, A. Freihe, University of Technology Aachen, and K.H. Brandt, Deutsche Steinkohle AG, Germany ........................................ 210

Roof Bolting/Cable Bolting

26. Roof Bolt Response to Shear Stress: Laboratory Analysis, E. McHugh and S. Signer, NIOSH-Spokane Research Lab, Spokane, WA ........................................ 232

27. Laboratory Study of Shear Loading and Bolt Load Transfer Mechanisms Under Constant Normal Stiffness Conditions, N. Aziz, B. Indraratna, and A. Dey, University of Wollongong, Wollongong, Australia and Y. Wang, Jonmar Corporation, Pittsburgh, PA ........................................ 238

28. Analysis of Cable Bolt Performance Using Numerical Modeling, N. Boutellida and H.S. Milii, McGill University, Montreal, Canada ........................................ 248

Multiple Seam Ground Control

Pillar

33. Calibration of the Analysis of Longwall Pillar Stability (ALPS) Chain Pillar Design Methodology for Australian Conditions, M. Colwell, Colwell Geotechnical Services, Queensland, Australia, R. Frith, Strata Engineering, New South Wales, Australia, and C. Mark, NIOSH-Pittsburgh Research Lab, Pittsburgh, PA ...................... 282

High Horizontal Stress

35. The Advance and Relieve Mining Method: A Horizontal Stress Control Technique, F. Chase, C. Mark, and T. Mucho, NIOSH-Pittsburgh Research Lab, Pittsburgh, PA and P. Campbell, and A.D. Holbrook, Coastal Coal Company, Coeburn, VA ........................................ 300
36. Localized Horizontal Stress and Its Effect on Ground Control, J.C. Stankus and Y. Wang, Jennmar Corporation, Pittsburgh, PA ..................... 309

Surface Subsidence

37. Prediction and Control of Surface Subsidence Over Abandoned Mined Lands in Carbonia (Italy), P.P. Manca, University of Cagliari and R. Loris, F. Manca, and E. Sirigu, Prog emissa Environmental and Mining Co., Italy .................................................. 315
38. Effects of Mining on Underground Infrastructures in the German Hard Coal Sector, A. Sroka, Deutsche Steinkohle AG and A. Preuße and C. Herzog, University of Technology Aachen, Germany .................. 322
39. Ground Deformation in the Case of Underground Mining of Thick and Dip Coal Seams in Jiu Valley Basin, G. Oncicioiu and I. Onica, University of Petrosani, Romania .................................................. 330
40. Prevention of Time-dependent Subsidence by Elimination of Ground Movement Over an Abandoned Mine, V.V. Nazimko, Donetsk State Technical University, Donetsk, Ukraine, S. S. Peng, West Virginia University, Morgantown, WV, and E. Zvjaginsky, Zasiadko Coal Mine, Donetsk, Ukraine .......................... 336
