19th CONFERENCE ON GROUND CONTROL IN MINING

TABLE OF CONTENTS

Mapping of Roof Geology and Openings

1. An approach to identifying geological properties from roof bolt drilling parameters, G. Finfinger, NIOSH-Pittsburgh Research Laboratory, Pittsburgh, PA, S. Peng and Q. Gu, West Virginia University, Morgantown, WV, G. Wilson, J.H. Fletcher and Co., Huntington, WV, and B. Thomas, Structured Mining Systems, Inc., Canonsburg, PA ........................................ 1

2. Field experience of measuring the acoustic energy from a hammer blow to coal mine roof and its relationship to roof stability, P. Altounyan, Rock Mechanics Technology Ltd., UK and D. Minney, Anglo Coal, South Africa, ................................................................. 12

3. Advancements in reflective seismic tomography for the location of old works and characterization of structural anomalies impacting underground developments, D. Hanson, M. DeMarco, A. Rock, and J. Descour, NSA Engineering, Inc., Golden, CO ........................................ 19

Longwalling in Hardroof Condition

4. Longwall geomechanics, an Australian perspective, M. Kelly, CSIRO Exploration and Mining, Australia .................................................................................................................. 29

5. Moonee Colliery: renewing the economic viability of a mine using micro-seismic and hydraulic fracturing techniques in massive roof conditions, P. Hayes, Coal Operations Australia Ltd., Australia .................................................................................................................. 38

6. Successful application of hydraulic fracturing to control windblast hazard at Moonee Colliery, NSW, Australia, K. Mills, Strata Control Technology Pty. Ltd., Australia, R. Jeffrey, CSIRO Petroleum, Australia, and D. Jones, Coal Operations Australia Ltd., Australia .................................................................................................................. 45

7. Pillar mining and longwalling below massive roof strata: geotechnical issues and two case-studies in Australia, S. Singh, Central Mining Research Institute, India and B. Hebblewhite, University of New South Wales, Australia .................................................................................................................. 51

Longwall Tailgate Supplementary Supports

9. Single point and full scale laboratory testing of timber check construction, J. Galvin and C. Offner, University of New South Wales, Australia .................................................................................................................. 67

10. Optimizing secondary roof support with the NIOSH support technology optimization program (STOP), T. Barczak, NIOSH-Pittsburgh Research Laboratory, Pittsburgh, PA .................................................................................................................. 74

11. The use of cribless tailgates in longwall extraction, R. Frith, Strata Engineering (Australia) Pty. Ltd., Australia .................................................................................................................. 84

Coal Bumps and Gas Outbursts

13. Development of stress measurement techniques in bump prone coal for safety decisions, E. Zahl and J. Dunford, NIOSH-Spokane Research Laboratory, Spokane, WA, A. Schissler, RAG American Coal, Helper, UT, and M. Larson, P. Pierce, and F. Jones, NIOSH-Spokane Research Laboratory, Spokane, WA .................................................................................................................. 101

14. Coal mine seismicity and bumps: historical case studies and current field activity, J. Ellenberger and K. Heasley, NIOSH-Pittsburgh Research Laboratory, Pittsburgh, PA .................................................................................................................. 112

15. Multi-scale assessment of coal and gas outbursts based on fractal measurements, M. Liu, H. Jun, and A. Yan, Jiaozuo Institute of Technology, China .................................................................................................................. 121
19th CONFERENCE ON GROUND CONTROL IN MINING

Horizontal Stress

16. Horizontal stress - the root of all evil?, J. van der Merwe, CSIR Division of Mining Technology, South Africa ........................................................................................................ 129
17. Utilizing the “advance and relieve” method to reduce horizontal stress affects on the mine roof, a case study, D. Dolinar, T. Mucho, and D. Oyler, NIOSH-Pittsburgh Research Laboratory, Pittsburgh, PA and J. Public, Tanoma Mining Co., Marion Center, PA ........................................................................ 137

Surface Subsidence

18. Regional horizontal surface displacements due to mining beneath severe surface topography, B. Hebblewhite, University of New South Wales, A. Waddington, Waddington & Associates, and J. Wood, BHP Illawarra Collieries, Australia ........................................................................... 149
19. Prognosis and control of mining induced surface subsidence and ground movements in the German hardcoal sector, case studies, A. Preusse and C. Herzog, University of Technology, Germany, A. Sroke, TU Bergakademie Freiberg, Germany, and E. Gruen, Deutsche Steinkohle AG, Germany ........................................................................................................ 158
20. Prediction of subsurface subsidence for longwall mining operations, Y. Luo and S. Peng, West Virginia University, Morgantown, WV .................................................................... 163
22. Evaluation of surface subsidence potential along a pipeline due to abandoned coal mine works, T. Vandergrift, NSA Engineering, Inc., Golden, CO ........................................................................ 176

Stone Mines

23. Roof monitoring in limestone mines-experience with the Roof Monitoring Safety System (RMSS), T. Marshall, L. Froesser, and A. Iannacchione, NIOSH-Pittsburgh Research Laboratory, Pittsburgh, PA and M. Dunn, Conoco Western Stone Co., North Aurora, IL ........................................................................ 185

Multiple-seam Mining

25. Potential problems related to mining under or adjacent to flooded workings, S. Michalek and K. Wu, MSHA, Pittsburgh, PA ........................................................................................................ 199
26. Mine planning for longwall and pillar retreat panels subject to seam interaction effects, T. Vandergrift and T. Ross, NSA Engineering, Inc., Golden, CO, W. Hawley, Mingo Logan Coal Company, Wharncliffe, WV, and J. Rusnak, Peabody Group, St. Louis, MO ........................................................................ 204
27. Optimization of district-wide mine layout in multi-seam mining: a case study, H. Li, M. Liu, O. Kang, and X. Zhai, Jianzuo Institute of Technology, China ........................................................................ 213

Roof and Cable Bolting Technology

28. Application of bolt design criteria at Galatia Mine, T. Denton, American Coal Co., Harrisburg, IL and J. Stankus and Y. Wang, Keystone Mining Services, Pittsburgh, PA ........................................................................ 219
29. The utilization of rockbolting technology and monitoring techniques in the German coal fields, T. Laechs, RAG American Coal Co. and K. Opolony and N. Polyaos, Deutsche Steinkohle AG, Germany ........................................................................................................ 225
30. Rockbolting for highly stressed roadways, H. Withaus and U. Ruppel, Deutsche Montan Technologie GmbH, Germany ................................................................................................. 234
31. Evaluation of measurement systems for monitoring the stability of rock bolted roadways with rectangular cross section by selected examples, A. Preusse and C. Herzog, University of Technology, Germany and K. Brandt, Deutsche Steinkohle AG, Germany ........................................................................ 241
19th CONFERENCE ON GROUND CONTROL IN MINING

32. Quality management for grouted rockbolts, D. Wittenberg and U. Ruppel, Deutsche Montan Technologie GmbH, Germany ................................. 249
33. Evaluating anchorage mechanisms of fully encapsulated rock bolts, C. Offerer and J. Galvin, University of New South Wales, Australia and M. Fabjanczyk, Strata Control Technology, Australia ........................................ 255
34. INSTA\textsuperscript{TM} Cable Ox: a new tensionable & corrosion resistant cable bolt, J. Stankus, Keystone Mining Services, Pittsburgh, PA and K. Taylor, Jemmar Corporation, Pittsburgh, PA .......... 261
36. Progress in the development of a roof bolt design methodology based on resisting shear, R. Seedsman, Seedsman Geotechnical Pty. Ltd., Australia ........................................ 272

Pillars

38. Jointing effects on pillar strength, G. Esterhuizen, SRK Consulting, Denver, CO .............. 286

Roadway Stability

40. Stepwise support technology for extremely soft rock roadway and its engineering application, X. Xia, Baiji Coal Mine, China and N. Zhang and C. Hou, China University of Mining and Technology, China ........................................ 297

Room and Pillar Mining

41. Mobile roof supports for pillar retreat mining, R. Kudlawiec, Killam Associates, Somerset, PA .......... 301
42. Three-dimensional simulations of the roof behavior in coal room and pillar panels, A. Vervoort and J. Mertens, KULeuven, Belgium and B. Jack, CSIR Division of Mining Technology, South Africa ............... 306
43. Roof behavior in South African coal room and pillar panels, B. Jack, CSIR Division of Mining Technology, South Africa ........................................ 315
44. Extended cut out distances in continuous miner sections in South African collieries, I. Canbulat and J. van der Merwe, CSIR Division of Mining Technology, South Africa ............................. 325

Roof Control/Benchmarking/Mine Design

45. Roof control analysis in North River Mine, M. Watts, North River Mine, Berry, AL and J. Stankus and Y. Wang, Keystone Mining Services, Pittsburgh, PA ................................. 332
47. The application of rock mass classification principles to coal mine design in UK conditions, D. Reddish, D. Whittles, and L. Stace, University of Nottingham, UK ........................................ 348
48. Mining geotechnical benchmarking, V. Scovazzo and R. Moran, John T. Boyd Company, Pittsburgh, PA ........................................ 358

Rock Properties

49. Using the point load test to determine the uniaxial compressive strength of coal measure rock, J. Rusnak, Peabody Group, St. Louis, MO and C. Mark, NIOSH-Pittsburgh Research Laboratory, Pittsburgh, PA ........................................ 362
50. The influence of water content on strength characteristic of sandstone subject to triaxial test, S. Kramadibrata, M. Rai, G. Siamangunsong, and I. Ari, Institut Teknologi Bandung, Indonesia and I. Setiawan, Cimbilin Coal Mine, Indonesia ........................................ 372
19th CONFERENCE ON GROUND CONTROL IN MINING

Entry Reinforcement

51. Polymer membrane liners in underground coal mines - ground control for the Millenium?,
     D. Laurence, J. Calvin, and L. Beer, University of New South Wales, Australia ............... 378

52. Applications of cement grouting method for controlling weak strata, H. Anwar, Indonesian Institute
     of Sciences, Indonesia and H. Shimada, M. Ichinose, and K. Matsui, Kyushu University, Japan .......... 387

Surface Mining

53. Analysis of safety aspects and mining practices for effective ground control in surface mining,
     S. Bhatt and C. Mark, NIOSH-Pittsburgh Research Laboratory, Pittsburgh, PA ................... 395

Author's Index ................................................................. 405
