# TABLE OF CONTENTS

## Longwall Mining

1. Pillar design and roof support for controlling longwall headgate subject to high horizontal stresses, D. Su, CONSOL Energy, South Park, PA, D. Draskovich, CONSOL Energy, Glen Easton, WV, and E. Thomas, CONSOL Energy, Pittsburgh, PA .............................. 1

2. Stress analysis and support design for longwall mine-through entries (a case study), K. Heasley, West Virginia University, Morgantown, WV, P. Worley, Eastern Associated Coal Corporation, Wharton, WV, and Y. Zhang, West Virginia University, Morgantown, WV ................................. 11

3. The utilisation of numerical modelling to predict water and gas flows around longwall panels; two case studies from the UK coal mining industry, D. Reddish, L. Stace, and D. Whittles, University of Nottingham, United Kingdom ................................................................. 19

4. Longwall roof fall prediction and shield support recommendations, U. Langosch, U. Ruppel, and H. Witthaus, Deutsche Montan Technologie GmbH, Germany ............................................................... 27

5. Comparison of multiple and single entry roadways for highly stressed longwalls, K. Opalony, Deutsche Stein Kohle AG, Germany and H. Witthaus, Deutsche Montan Technologie GmbH, Germany ................ 33

7. The characteristics of mining-induced fractures in overlying strata, J. Xu and M. Qian, China University of Mining and Technology, P.R. China and H. Yu, HuaiBei Coal Mining Administration, P.R. China .......................... 44

## Multiple Seam Mining

8. Design and experience of total extraction room and pillar operations above depleted longwall panels, K. Rigsby and D. Jacobs, Black Mountain Resources LLC, Benham, KY and V. Scovazzo, John T. Boyd Company, Canonsburg, PA ................................................................. 48

9. Using site case histories of multiple seam coal mining to advance mine design, J. Ellenberger, F. Chase, and C. Mark, NIOSH - Pittsburgh Research Lab, Pittsburgh, PA, Keith Heasley, West Virginia University, Morgantown, WV, and J. Marshall, NIOSH - Pittsburgh Research Lab, Pittsburgh, PA ................................................................. 59
Room and Pillar Mining

10. Mining method for extracting an eight metre coal horizon containing a sandstone layer, F. Hunter, Sasol Mining, South Africa .......................... 65
13. Pillar optimization for initial design and retreat recovery, C. Steed, W. Pitman, D. Roberts, and J. Carvalho, Golder Associates Ltd., Canada .... 86

Monitoring

14. Application of RMT's remote reading telltale system to monitor roof movement during face retreat at West Colliery, Germany, D. Bigby and D. Lewis, Rock Mechanics Technology Ltd., United Kingdom and F. Lüttig, Deutsche Steinkohle AG, Germany ........................................ 95
16. New tools for roof support evaluation and design, S. Signer and C. Sunderman, NIOSH - Spokane Research Lab, Spokane, WA ......................... 114
17. Considerations for using roof monitors in underground limestone mines in the USA, L. Prosser, T. Marshall, S. Tadolini, and A. Iannaccione, NIOSH - Pittsburgh Research Lab, Pittsburgh, PA and C. Banta, Liter's Inc., Louisville, KY .................................................. 119

Geology and Mine Mapping

18. Mine roof geology information system (MRGIS), S. Peng, D. Tang, B. Mirabile, and Y. Luo, West Virginia University, Morgantown, WV and G. Wilson, J.H. Fletcher & Co., Huntington, WV ........................................ 127
19. Imaging ahead of mining with radio imaging method (RIM-IV) instrumentation and three-dimensional tomography software, L. Stolarczyk, Stolar Horizon, Inc., Raton, NM and S. Peng and Y. Luo, West Virginia University, Morgantown, WV ............................... 136
20. Geophysics for the detection of abandoned mine workings, C. Phillips, M. Monier-Williams, and G. Schneider, Golder Associates Ltd., Canada ................................................................. 144
21. Investigation of seam thickness and seam splitting within a longwall panel by an in-seam seismic survey, W. Schott, Deutsche Montan Technologie GmbH, Germany and K. Brandt, Deutsche Steinkohle AG, Germany .............................................. 152

23. RQD from the barrel to the box: weatherability may be a better indicator for roof support design, K. Unrug, University of Kentucky, Lexington, KY and P. Padgett, Black Beauty Coal Co., Evansville, IN ........ 162

Support Design

24. A probabilistic approach to ground support design in underground mines, K. Beauchamp and D. Morrison, Golder Associates Ltd., Canada ........ 168

25. The requirements of a database to store geotechnical data to assist in roof support design, R. Seedsman, Seedsman Geotechnics Pty. Ltd., Australia .............................................................. 173

Geotechnical Planning

26. Variation of horizontal stresses and strains in mines in bedded deposits in the Eastern and Midwestern United States, D. Dolinar, NIOSH - Pittsburgh Research Lab, Pittsburgh, PA ......................... 178

27. Geotechnical planning basis for the optimization of workings, N. Polysos and K. Brandt, Deutsche Steinkohle AG, Germany and S. Peters, Deutsche Montan Technologie GmbH, Germany .............. 186

Roof Bolting

29. Study of load transfer capacity of bolts using short encapsulation push test, N. Aziz and B. Webb, University of Wollongong, Australia ...... 203

30. Intersection stability and tensioned bolting, Y. Zhang and S. Peng, West Virginia University, Morgantown, WV ......................... 208
31. Premature rock bolt failure through stress corrosion cracking (SCC), B. Hebblewhite, University of New South Wales, Australia, M. Fabjanczyk, SCT Operations Pty. Ltd., Australia, P. Gray, Ground Support Services Pty. Ltd., Australia, and A. Crosky, University of New South Wales, Australia ........................................... 218

32. Short-encapsulation pull tests for roof bolt evaluation at an operating coal mine, J. Pile and S. Bessinger, BHP Billiton San Juan Coal Company, Waterflow, NM and C. Mark and S. Tadolini, NIOSH - Pittsburgh Research Lab, Pittsburgh, PA ................................................................................... 226

33. Field test with strain-gauged friction bolts at the Gold Hunter Mine, Mullan, Idaho, USA, J. Johnson, T. Williams, C. Sunderman, and S. Signer, NIOSH - Spokane Research Lab, Spokane, WA and D. Bayer, Hecla Mining Company, Mullan, ID ................................................................................... 233

34. Directional rock bolt pullout tests as index tests for estimating rock mass quality, M. Alber, Ruhr-University, Germany, N. Polysos, Deutsche Steinkohle AG, Germany, and S. Rühl, Ruhr-University, Germany ................. 240

35. Eclipse bolting system, A. Campoli and P. Mills, Minova USA Inc., Georgetown, KY and L. Adams, Panther Mining, Cumberland, KY ........................................... 246

36. The application of pre-tensioned grouted tendons at Harworth Colliery, UK, C. Adams, Mining Consultant, United Kingdom and G. Rennison, Harworth Colliery, United Kingdom ........................................... 249

37. Investigation into the extent and mechanisms of gloving and un-mixed resin in fully encapsulated roof bolts, R. Campbell, SCT Operations Pty. Ltd., Australia and R. Mould, Solid Energy NZ Ltd., New Zealand ................................................................................... 256

---

**Mine Seismicity**

40. Recent developments in the use of seismic tomography in longwall mines, E. Westman, Virginia Polytechnic Institute and State University, Blacksburg, VA ................................................................................... 278
Supplementary Supports

41. Pumpable roof supports: developing design criteria by measurement of the ground reaction curve, T. Barczak, NIOSH - Pittsburgh Research Lab, Pittsburgh, PA, J. Chen, RAG American Coal Holding, Inc., Waynesburg, PA and J. Bower, Heintzmann, Morgantown, WV 283

Computer Modeling

43. The effect of standing support stiffness on primary and secondary bolting systems, S. Tadolini and T. Barczak, NIOSH - Pittsburgh Research Lab, Pittsburgh, PA and Y. Zhang, West Virginia University, Morgantown, WV 300

44. Numerical modeling of the U1A complex at the Nevada test site: model development and comparison of different drift mining options, K. Zipf, Jr., NIOSH - Pittsburgh Research Lab, Pittsburgh, PA and F. Heuze, Lawrence Livermore National Lab, Berkeley, CA 308

Mine Stability

46. A study of potential fault reactivation and water intrusion at a longwall coal mine in Appalachia, F. Kendorski, Agapito Associates, Inc., Lombard, IL 326

Roof Falls

47. The elimination of rock-fall fatalities in Ontario hardrock mines, D. Morrison, Golder Associates Ltd., Canada 330

48. Root causes of groundfall related incidents in U.S. mining industry, K. Biswas, University of Maryland, Baltimore, MD and K. Zipf, Jr., NIOSH - Pittsburgh Research Lab, Pittsburgh, PA 335
22nd International Conference on Ground Control in Mining

Subsidence

49. Analysis on the dynamics of mining subsidence in range of a product transmission overhead line, A. Preusse and J. Kateloe, RWTH Aachen University, Germany, A. Sroka, Freiberg University of Mining and Technology, Germany, and P. Spielberg, Deutsche Steinkohle AG, Germany .................................................. 344

50. Mitigating subsidence influences on residential structures caused by longwall mining operations, Y. Luo and S. Peng, West Virginia University, Morgantown, WV and C. Zabrosky and J. Cole, RAG Emerald Resources Corporation, Waynesburg, PA ............... 352

51. Influences of longwall subsidence on a guyed steel tower - a case study, Y. Luo and S. Peng, West Virginia University, Morgantown, WV and B. Miller, RAG Emerald Resources Corporation, Waynesburg, PA .... 360

52. Surface movement of super-wide longwall panels using top-coal caving method, S. Cao and X. Miao, China University of Mining and Technology, P.R. China and J. Guo and Y. Zhang, Lu’an Coal Mining Administration, P.R. China ........................................................................ 367

Rock Mechanics

53. New approach to evaluate the stability of yield pillars, K. Morsy and S. Peng, West Virginia University, Morgantown, WV ..................... 371

54. Experimental study of acoustic emission characteristics for burst-prone coal/rock fracture process, C. Liu, Z. Wan, Y. Wang, and P. Yang, China University of Mining & Technology, P.R. China ........... 378

Author’s Index ........................................................................ 382
