# TABLE OF CONTENTS

Keynote Address Presented at the 24th International Conference on Ground Control in Mining, August 2-4, 2005, P. Lilly, CONSOL Energy, Inc., Pittsburgh, PA ................................................................. 1

Dr. Daniel W. H. Su, recipient of the 2005 Syd S. Peng Ground Control in Mining Award, Letter of Nomination ................................................................. 8

## Computer and Physical Modeling

1. 25 Years of Progressive in Numerical Modeling for Ground Control – What Have We Accomplished and Where Do We Go Next?  
   K. Heasley, West Virginia University, Morgantown, WV and D. Su, CONSOL Energy, Eighty Four, PA ................................................................. 10

2. Detailed Stress Analysis of Longwall Panels, K. Morsy, Suez Canal University, Suez, Egypt and S. Peng, West Virginia University, Morgantown, WV ................................................................. 18

3. Deriving Input Parameters for Numerical Modeling of Fully Resin Grouted Rock Bolts, M. Alber, Ruhr University, Bochum, Germany ............... 34

5. Sublevel Caving Mining Method for Extra-Thick Coal Seams, H. Nan and Y. Zhou, Henan Polytechnic University, Jiaozuo, Henan, China .......... 47

## Geology in Ground Control

7. Identifying Moisture Sensitive Roof Rocks in Coal Mines, G. Molinda and D. Oyler, NIOSH-Pittsburgh Research Laboratory, Pittsburgh, PA, and H. Grgenli, West Virginia University, Morgantown, WV ................................................................. 57

8. Geomechanical and Weathering Properties of Weak Roof Shales in Coal Mines, H. Grgenli and S. Peng, West Virginia University, Morgantown, WV ................................................................................................. 65

9. Effect of Faults on the Movement of Roof Strata in Gateroads, P. Gou and Y. Hu, Henan Polytechnic University, Jiaozuo, Henan, China ........ 74
## Geophysics in Ground Control

10. **Reflections on the Application of Geophysics to Ground Control**, P. Hatherly, University of Sydney, Sydney, NSW, Australia ........................................... 78

## Ground Control

15. **25 Years of Ground Control Developments, Practices, and Issues in Australia**, B. Hebblewhite, The University of New South Wales, Sydney, Australia ........................................................................................................... 111

16. **Coal Mine Ground Control in Western Europe; Past, Present and Future**, D. Bigby, P. Al touryan, and J. Cassie, Rock Mechanics Technology Ltd., Burton-on-Trent, UK ........................................................................................................... 118

17. **Field Verification of the Roof Fall Risk Index: A Method to Assess Strata Conditions**, A. Iannacchione and G. Esterhuizen, NIOSH-Pittsburgh Research Laboratory, Pittsburgh, PA, S. Schilling, Graymont (PA), Inc., Pleasant Gap, PA, and T. Goodwin, Hanson Aggregates North America, Connellsville, PA ........................................................................................................... 128

20. Load Capacity and Stiffness Characteristics of Screen Materials Used for Surface Control in Underground Coal Mines, D. Dolinar, NIOSH-Pittsburgh Research Laboratory, Pittsburgh, PA ................................................. 152
22. Correlation of Acoustic Emission (A.E.) with Physical and Mechanical Properties of Different Types of Rock and Coal Specimens, B. Mishra and A. Khair, West Virginia University, Morgantown, WV............................................................... 165
23. Application of Electrohydrodynamic Method and High-Pressure Water Jets as Non-Blasting Alternative of Rock Breaking and Splitting in Open Pits, K. Kotwica and J. Reś, University of Mining and Metallurgy, Krakow, Poland ............................................................................................................................... 171

Impoundments Stability

Longwall Gateroad Support Design

27. Why Uniaxial Compressive Strength and Young’s Modulus Are Potentially Poor Indicators of Roadway Roof Stability – Except in the Tailgate, R. Frith, University of New South Wales, Sydney, Australia and M. Colwell, Colwell Geotechnical Services, Queensland, Australia ............................................................................................ 198
28. Applied Geomechanics for Support Design in German Deep Coal Mines, H. Witthaus and N. Polysos, Deutsche Steinkohle AG, Herne, Germany and S. Peters, Deutsche Montan Technologie GmbH, Essen, Germany ....................................................................................... 208
Longwall Operations

Longwall Shields and Standing Supports

32. **A Retrospective Assessment of Longwall Roof Support with a Focus on Challenging Accepted Roof Support Concepts and Design Premises**, T. Barczak, NIOSH-Pittsburgh Research Laboratory, Pittsburgh, PA.................................................................................................................... 232

33. **Towards a Real Time Response to Changing Strata Conditions on a Longwall**, R. Trueman and G. Lyman, University of Queensland, Brisbane, Qld., Australia, M. Callan and B. Robertson, Anglo Coal Pty. Ltd., Brisbane, Qld., Australia, and A. Cocker, University of Queensland, Brisbane, Qld., Australia ........................................................................................................ 245

34. **Classification of Chock Shields Behaviour in an Indian Longwall Mine in Real Time**, S. Tadisetty and R. Gupta, National Institute of Rock Mechanics, Karnataka, India and K. Matsui and H. Shimada, Kyushu University, Fukuoka, Japan .......................................................... 252

Mine Design

35. **Horizontal Stress and Coal Mines: Twenty-Five Years of Experience and Perspective**, G. Hasenfus and D. Su, CONSOL Energy, CNX Coal Operations, Pittsburgh, PA ........................................................................................................ 256

38. **Geology, Ground Control, and Mine Planning at Bowie Resources, Paonia, CO**, C. Stewart and G. Hunt, Bowie Resources, Paonia, CO and C. Mark, NIOSH-Pittsburgh Research Laboratory, Pittsburgh, PA.......................... 284

40. **Empirical Mine Design for Western Underground Metal Mines**, T. Brady, L. Martin, and T. Williams, NIOSH-Spokane Research Laboratory, Spokane, WA and R. Pakalnis and P. Hughes, University of British Columbia, Vancouver, British Columbia, Canada.............................. 300
Multiple-Seam Mining Interactions

41. Multiple Seam Mining Interactions – A Case Study, K. Morsy and A. Yassien, Suez Canal University, Suez, Egypt and S. Peng, West Virginia University, Morgantown, WV ............................................................ 308

42. Multiple Seam Mining Feasibility in the Illinois Basin (USA): LaModel Stress Analysis Programs, R. Hardy and K. Heasley, West Virginia University, Morgantown, WV and P. Padgett Meighen, Foundation Coal Company, Keensburg, IL ...................................................... 315

43. Multiple-Seam Inter-Burden Stress Distribution Using Strip-Pillar Mining Method, J. He and K. Deng, China University of Mining & Technology, Xuzhou, Jiangsu, China .............................................................. 321

Pillar and Pillar Extraction

44. The Evolution of Intelligent Coal Pillar Design: 1981-2006, C. Mark, NIOSH-Pittsburgh Research Laboratory, Pittsburgh, PA................................................. 325

45. Beyond Coalbrook: Critical Review of Coal Strata Control Developments in South Africa, J. van der Merwe, University of Pretoria, Pretoria, Republic of South Africa ............................................................... 335

48. Relationship between the Width of Strip Pillar Yield Zone and Recovery Ratio, W.B. Guo, Henan Polytechnic University, Jiaozuo Henan, China, K. Deng, China University of Mining & Technology, Xuzhou, Jiangsu, China, and Y. Zou, Henan Polytechnic University, Jiaozuo, Henan, China ................................................................................................. 362

50. Investigation of the Stability of a Pillar Retreat Section at the Fletcher Mine, D. Tesarik, B. Seymour, L. Martin, and M. Jones, NIOSH-Spokane Research Laboratory, Spokane, WA and T. Yanske, the Doe Run Company, Viburnum, MO ........................................................................................................ 374
Roof Bolting

51. Twenty-Four Conferences; More Than One-Hundred and Seventy Papers; Understanding Roof Bolt Selection and Design Still Remains Priceless, S. Tadolini, NIOSH-Pittsburgh Research Laboratory, Pittsburgh, PA and R. Mazzoni, MSHA-Pittsburgh Safety and Health Technology Center, Pittsburgh, PA ................................................................. 382

53. Characterization of Internal Insertion Pressure During Installation of Fully Grouted Bolts, L. Giraldo, S. Cotten, and J. Farrand, Raytheon UTD Inc., Springfield, VA ........................................................................ 395

Roof Bolting- Resin

56. Load Capacity and Bond Behavior of Resin Grouted Rock Bolts, N. Slatalla and M. Alber, Ruhr-University, Bochum, Germany ........................................ 412

57. Insitu Performance of One Step Bolts to New Zealand Thick Coal Seam Mining Environments, R. Campbell, Solid Energy New Zealand, Greymouth, New Zealand and D. Pastars, Solid Energy New Zealand, Huntly, New Zealand ................................................................................. 418

Subsidence

59. Quality Assurance in the Processing of Mining-Induced Subsides and Research Work into Mining Subsidence Engineering in the German Hard Coal Industry, P. Fischer and M. Hegemann, Deutsche Steinkohle AG, Herne, Germany, A. Preusse and H. Kateloe, RWTH Aachen University, Aachen, Germany, and A. Sroka, Freiberg University of Mining & Technology, Freiberg, Germany ......................................... 431
25th International Conference on Ground Control in Mining

60. **Physical Simulation of Overburden Movement and Stability of Aquiclude in Shallow Seam Mining**, Q. Huang, Xi’an University of Science & Technology, Xi’an, Shaan’xi, China ........................................................................ 439

61. **Overburden Subsidence Characteristics When Mining in Weak Rocks and Subject to Special Mining Conditions**, W. Zhang, W. Guo, J. Cheng, Y. Yang, and C. An, Shandong University of Science & Technology, Qingdao, Shandong, China and C. Yang, Tianranjiao Mine, Zaozhuang, Shandong, China ........................................................................ 444

62. **Study on Environmental Management of Mining Subsidence Areas**, W. Guo, Y. Yang, J. Cheng, and M. Liu, Shandong University of Science & Technology, Qingdao, Shandong, China ........................................................................ 448

**Author’s Index** ....................................................................................................................... 451
